✉️ joacominatel@gmail.com

📍 Buenos Aires, Argentina

Passionate and results-driven backend developer with a strong foundation in software engineering, automation, and infrastructure. I specialize in building scalable APIs, financial systems, and real-time data pipelines using modern technologies like Go, Python, PostgreSQL, and Docker. I bring a pragmatic, performance-focused mindset to every project. I'm currently developing my own scalable products, driven by a long-term vision to lead innovative tech solutions from idea to execution.

WORK EXPERIENCE

Service Operations

Dentsu, May 2023 - Present

In charge of IT operations. In this role, I gained a deep understanding of servers, domains, and cloud platforms such as Azure. I managed Active Directory. Additionally, I designed and maintained databases, optimizing the management and storage of critical data.

Software Developer

Freelance, Jan 2021 - Present

As a freelance software developer, I specialize in SQL, creating databases. I have extensively worked with Python, PHP, and Go to develop efficient and scalable backend solutions. My experience ranges from implementing RESTful APIs to automating processes.
